

THE OPERATIONS PLATFORM FOR FIELD TEAMS

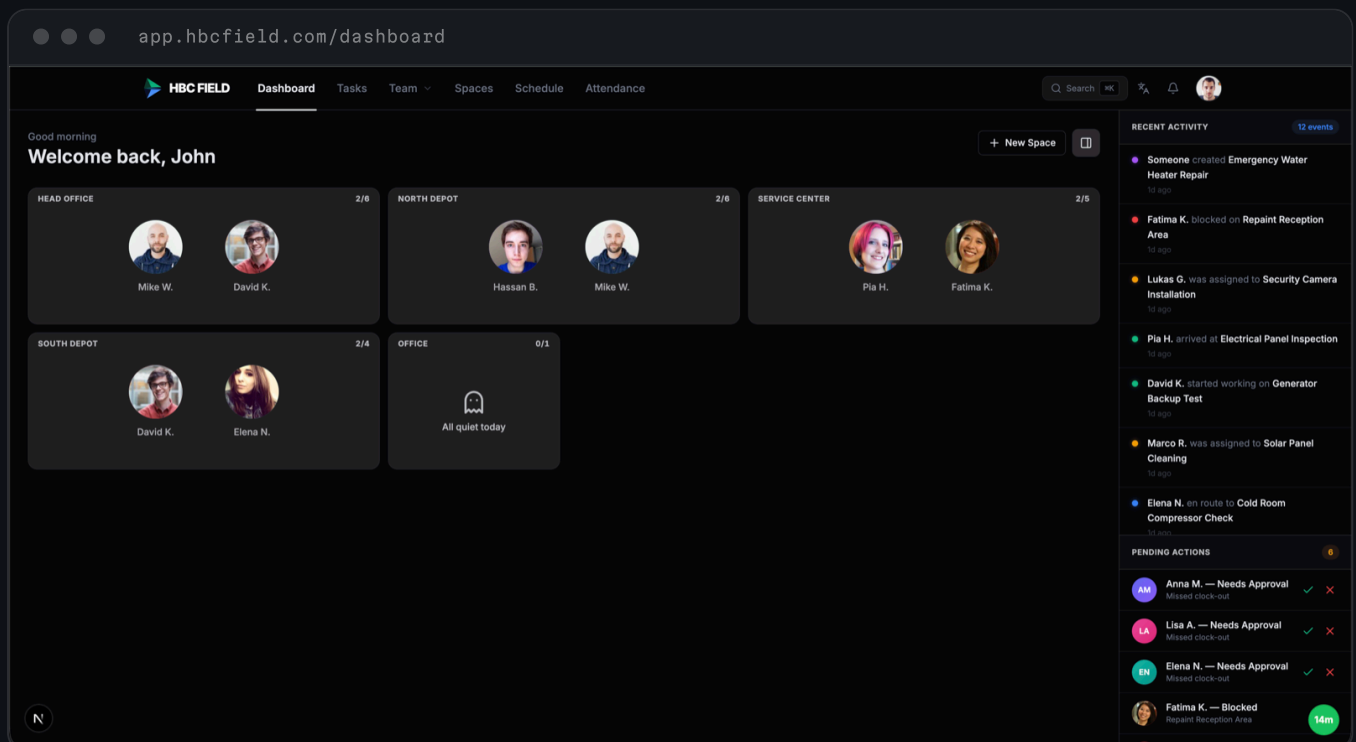

Your field, under command.

One platform to dispatch every job, track every technician in real time, prove every hour worked, and document every visit — replacing the three separate tools most field businesses juggle today.

DISPATCH & SCHEDULING

LIVE GPS & ROUTES

ATTENDANCE & OVERTIME

THE COMMAND CENTER — YOUR WHOLE OPERATION, LIVE.

Running a field team shouldn't take three apps and a spreadsheet.

Most field businesses run dispatch in one tool, time-tracking in another, and GPS in a third — then reconcile them by hand. **HBCField is one system that does all three**, split cleanly across a web portal for the office and a mobile app for the field.

01 / OFFICE

The web portal — dispatch & oversight

Admins and dispatchers create jobs, assign the right technician, watch the live map, approve hours and reports, and plan across every site — all in real time.

02 / FIELD

The mobile app — execution

Technicians see their day the moment they open it: accept and complete jobs, clock in on site, capture photos and signatures, and follow the route — online or on the move.

THE CORE FLOW - ONE THREAD FROM REQUEST TO RECORD

CREATE

Admin raises a job with location, due date & photos.

ASSIGN

Dispatcher checks availability & assigns — instant push.

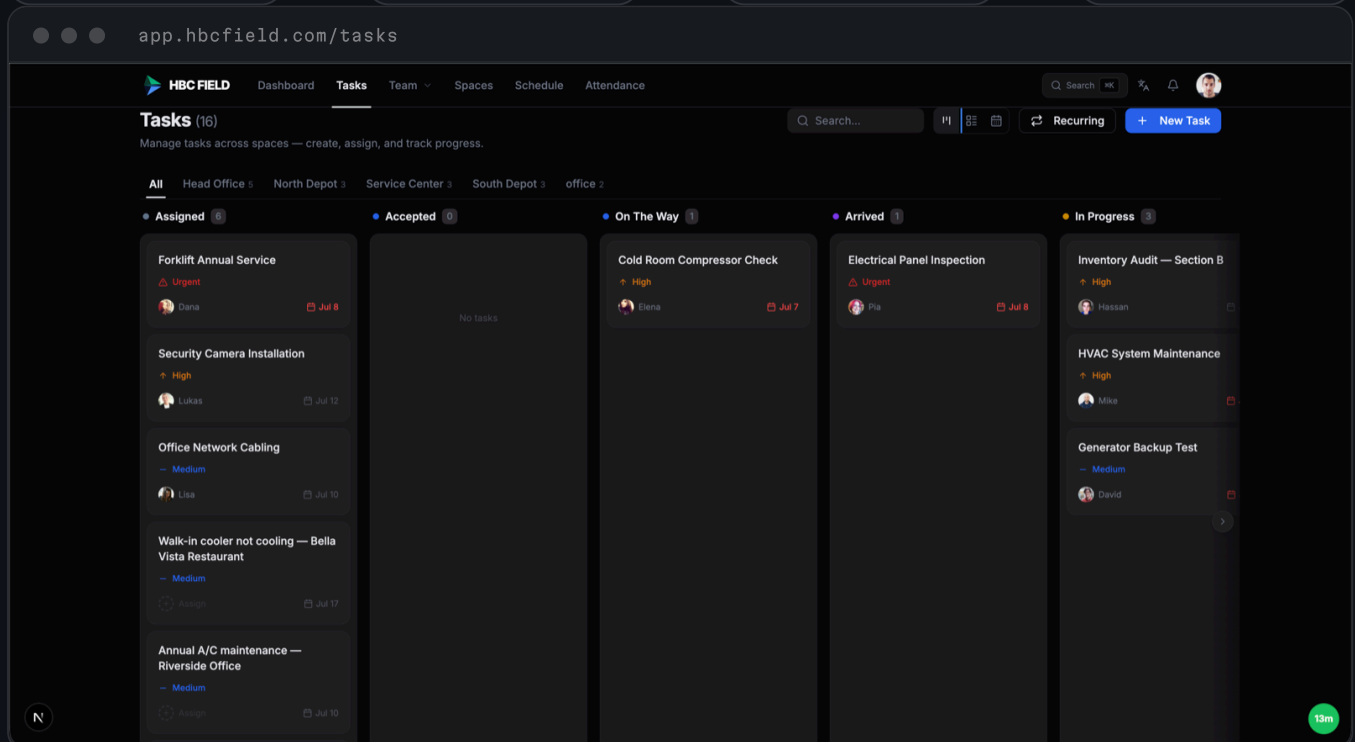

EXECUTE

Technician works the job; GPS records the exact route.

RECORD

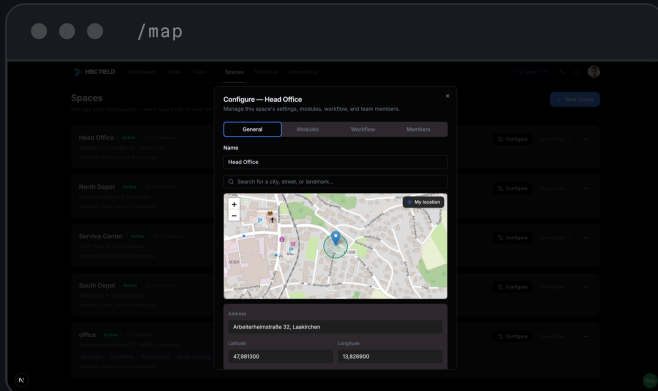

Signed service report, hours & history — automatically.

FROM DISPATCH TO DONE, ON ONE BOARD - EVERY JOB, LIVE.

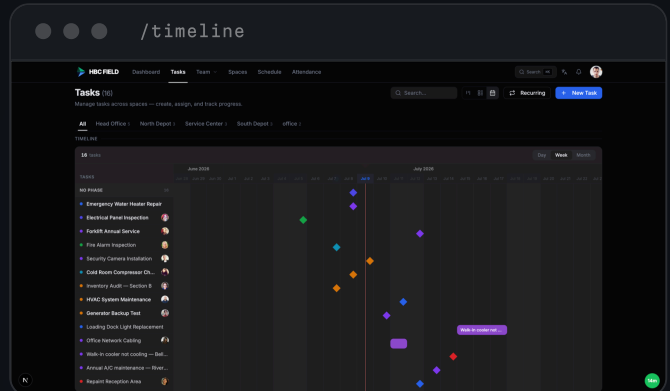

The office view of the field.

No more status calls or spreadsheets. Everything the office needs to run the day lives in one live web workspace.

Live map & exact routes

Geofenced sites and live GPS mean dispatch always knows where every technician is — and the exact road path each one drove, not a straight line.

Plan across every space

A timeline across all your sites, recurring jobs and technician availability — the capacity of your whole operation, in one view.

Real-time everything

Boards, maps and activity feeds update the instant something changes in the field — no refresh, no polling.

Approvals in one place

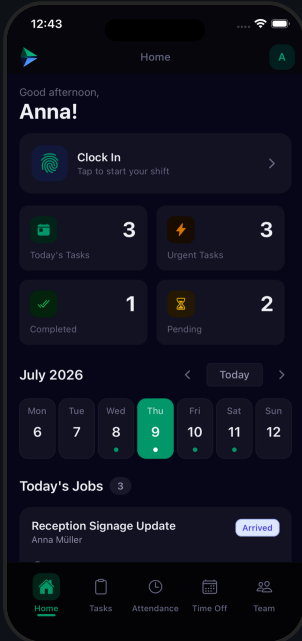

Pending hours, time-off and reports surface as actions — approve or reject without hunting.

Every space at a glance

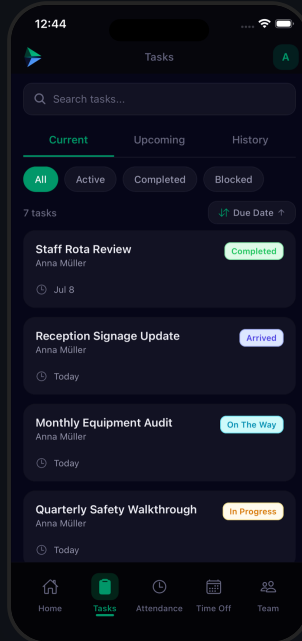

Run multiple sites, teams or client organizations from a single dashboard.

Built for the technician's pocket.

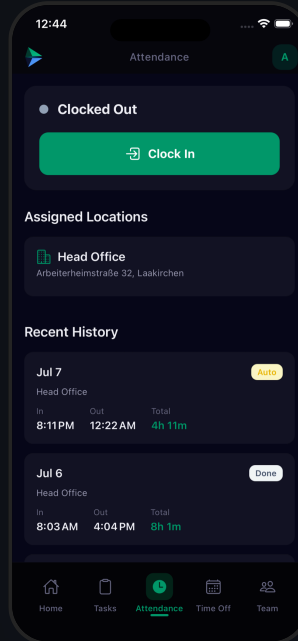

The mobile app puts the whole shift in one hand — and syncs it back to the office in real time.

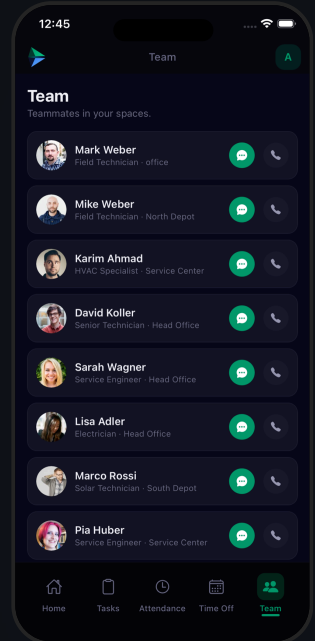

THEIR DAY, AT A GLANCE

EVERY JOB, ACCEPT →
DONE

CLOCK IN ON SITE –
VERIFIED

THE WHOLE CREW, ONE
TAP

GEOFENCED

Provable attendance

Clock-in is verified against the assigned location, with a full history — hours are provable, not guessed.

BACKGROUND

Exact-route GPS

The app records the true path even while backgrounded — battery-friendly, and accurate to the road.

ON SITE

Documented visits

Photos, parts used and a signed service report captured at the job — a complete record every time.

One login for the whole company. Access adapts to each person — owners see everything, dispatchers run the board, field staff see only their jobs. Role and permission are set per user, so one product fits very different team shapes.

Three tools in one — cheaper, and one login.

Most field businesses pay for a field-service tool, a time-clock tool, and a GPS tracker separately — three bills, three logins, and hours spent reconciling them. HBCField is all three, in one system.

WHAT YOU'D OTHERWISE BUY	TYPICAL COST	HBCFIELD
Field service management (Jobber, Housecall Pro)	€45-65 / user	✓ included
Time & attendance (Deputy, When I Work)	€5-8 / user	✓ included
GPS / route tracking (Hubstaff)	€8 / user	✓ included
Three separate subscriptions	€60-90 / user	one platform · from €29 / user

AND THINGS THE OTHERS MAKE YOU PAY EXTRA FOR - OR DON'T HAVE AT ALL

Exact background-route GPS

The real road path a technician drove, captured even when the phone is locked. Premium even in the FSM world — most gate it behind their top tier.

A real overtime engine

Policy-based overtime detection, geofenced auto-clock-out and an approval flow — far beyond a bolt-on time clock.

Multi-org & cross-team delegation

Franchises, subcontractors and agencies can manage many client organizations from one account — enterprise-grade, rare in SMB tools.

Configurable to your workflow

Custom fields, task types, recurring jobs and workflows mean the system bends to how you already work — it's a platform, not a rigid app.

The line that sells it: “Replaces Jobber + Deputy + Hubstaff — for less than one of them, on a single login.”

Built for field teams of every kind.

Wherever people do the work on the ground, HBCField coordinates it — and shows exactly who it helps, how, and what you save.

Property & facility management

Who — Landlords and facility managers with many buildings and units.

How — Tenant requests become dispatched tasks, geofenced clock-in per building, photo + signed service reports, recurring safety checks, live map and audit log.

Benefit — More units per coordinator, verified hours, documented compliance, faster tenant response.

HVAC, plumbing & electrical trades

Who — Installation and repair contractors with mobile technicians.

How — Jobs assigned by location and priority, status flow from en route to arrived to completed, service reports with parts and a customer signature, then invoicing.

Benefit — Faster turnaround, provable labour and parts, quicker billing.

Cleaning & janitorial services

Who — Commercial cleaning firms with recurring rounds across sites.

How — Recurring tasks per site, geofenced clock-in that proves attendance, and checklists via custom fields.

Benefit — No missed rounds, verified presence, less supervision.

Security & guarding

Who — Security firms running patrols and inspections.

How — Scheduled recurring patrol tasks, timestamped geofenced check-ins, GPS route proof, and photo incident reports.

Benefit — Verifiable coverage for clients and far fewer disputes.

Landscaping & grounds maintenance

Who — Outdoor crews servicing many sites.

How — GPS route-tracked visits, recurring seasonal schedules, and before/after photos.

Benefit — Efficient routing, documented work, clear proof for clients.

Equipment & appliance repair

Who — Field teams maintaining machines and assets on customer sites.

How — Asset-linked tasks with full maintenance history, service reports with parts, recurring maintenance and signatures.

Benefit — A complete history per asset, faster repeat visits, provable warranty work.

Less admin. Provable work. One source of truth.

End the status-call chaos

A live board and map replace the “where are you?” calls and the end-of-day spreadsheet.

Prove every hour

Geofenced clock-in and an audit trail turn payroll disputes into a non-issue.

Document every visit

Photos, parts and signed reports mean you can always show exactly what was done.

SIMPLE, HONEST PRICING - PAY FOR THE OFFICE SEATS, ADD THE FIELD FOR LESS

STARTER

€29 /user/mo

Tasks, attendance, GPS, schedules & mobile.

- + Live dispatch board
- + Geofenced clock-in
- + Exact-route GPS

PROFESSIONAL

POPULAR

€59 /user/mo

Everything in Starter, plus the full field toolkit.

- + Service reports & assets
- + Overtime engine
